Whether you arrive over the Mackinac Bridge from southern Michigan, cross the international bridge from Canada or drive along M-28 from Wisconsin and points west, start your tour at the heart of the trail in Newberry.

From downtown Newberry, the entire trail is a 150 mile drive through varied habitat and unique and pristine ecosystems.

If you have time, break the trail into two days, exploring the northeasterly wing one day (90 miles and 8 stops) and the southwesterly wing the next (60 miles and 6 stops).

The Heart of the Trail.

and your partner in conservation.*

1. Tahquamenon Logging Museum

has water associated birds including wood duck, sandhill cranes, Northern Waterthrush, Common Yellowthroat, American Redstart, Yellow and Yellow-Rumped warbler. Great-crested Flycatcher is seen here, as is yellow bellied sapsucker and hermit thrush.

2. Skyline Drive

or County Road 510 is noted for boreal chickadee, black-backed woodpecker, gray jay, both crossbills, and pine grosbeaks. Snipe and other water birds can be seen in the large adjacent bog complex. Palm and yellow-rumped warblers are often spotted here.

3. Camp 7

hardwoods is one of the first places to see forest warblers including black-throated blue, black-throated green, and blackburnian warblers. Barred owls and northern saw-whet owls are found here.

4. Tahquamenon Falls State Park

has a multitude of habitats. The Upper Tahquamenon Falls area offers a glimpse of Michigan's pre-settlement forests. This American beech, sugar maple, eastern hemlock, and yellow birch old-growth forest encompass 1,500 acres. In summer, songs of the winter wren, black-throated blue warbler, black-throated green warbler, blackburnian warbler, least flycatcher, rose-breasted grosbeak, red-eyed vireo, wood thrush, and veery fill the dense forest. This forest is also home to barred and sawwhet owls, northern tanager, and Swainson's thrush. The Lower Falls area offers a variety of birding opportunities. Along the "Mainland Trail", a 3/4 mile boardwalk through a narrow conifer lowland, river edge songbirds mingle with hardwood dwellers. Summer residents include American redstart, northern water thrush, mourning warbler, red-eyed vireo, and scarlet tanager. Bald eagles fish the rapids below the falls early in the morning. In the evenings, common nighthawks swoop up emerging insects in mid air. Other species common in and around the pool below the falls include the red-breasted and common mergansers, great blue heron, spotted sandpiper, belted kingfisher, osprey, and northern rough-winged swallow.

5. Clark Lake/Tahquamenon Natural Area

The one mile "two track" road to Clark Lake follows pine ridges along the edges of black spruce swamps and bogs. Be sure to look for spruce grouse along the way. Clark Lake trail is accessed at the end of the road where palm warbler, pine warbler, white-throated and Lincoln's sparrows, olive-sided flycatcher, gray jay, and black-backed woodpecker may be seen. Sandhill crane, brewer's blackbird, rusty blackbird, and Connecticut warblers also nest in this area.

6. Whitefish Point

is one of the most important spring flight corridors for raptors in North America and is the perfect place to observe migrating birds. Tens of thousands of sharp-shinned, Cooper's, rough-legged, and broad-winged hawks; peregrine falcons, kestrels and merlins; golden and bald eagles and other raptor species pass here annually during spring migration to their northern breeding grounds, and in the fall to their wintering grounds. The Whitefish Peninsula, a tapered promontory, juts into Lake Superior, welcoming the concentrations of hawks, owls, songbirds and myriad waterfowl. **Whitefish Point Bird Observatory** is a Globally Important Birding Area. Of the 409 species of birds accepted by the MI Bird Records Committee, more than 300 have been documented here.

7. Tahquamenon River Mouth

has several habitats for a variety of birds. In winter, featured birds are bald eagles, bohemian waxwings, and northern hawk owl. In migration and summer, featured birds are LeContes sparrow, winter wren, and merlin.

8. Hulbert Bog

is an accessible portion of a large bog complex from the Basnau Road. Winter visitors hope to see the boreal chickadee, gray jay, northern hawk owl, and great gray owl starting in November. Pine grosbeak, pine siskins and redpolls are seen here. Woodpeckers and nuthatches are common.

9. Erickson Center for the Arts in Curtis

has a woodland nature trail with possibilities of Black throated green warblers, Black-throated blue warblers, American Redstarts, Chestnut-sided warbler, Hermit thrush and Veery. In the summer Manistique Lakes have Common Loons, Great Blue Herons, Forster Terns, and Ring-billed gulls. Many warblers, vireos and orioles are found at the nearby boat launches at the north and south lakes.

14. Hamilton Lake Nature Area

has nature trails to take visitors through several habitats. Wood and Hermit Thrush are heard here. Woodland woodpeckers, chickadees, and nuthatches are here. Several warblers nest here, including Ovenbird, Yellow-Rumped, American Redstart, Black-Throated Green, Black-Throated Blue and Nashville. Wood ducks, Mallards and Osprey nest here.

13. Natalie State Forest Campground

on the Dollarville Flooding offer a mix of lowland aspen, spruce and open water marsh. Nashville, Magnolia, and Chestnut-sided Warbler, Common Yellow-throat and American redstart are seen here. Waterfowl and shorebirds include American bittern, sora, pied-billed grebe, Bufflehead, Common Goldeneye, blue-winged and green winged teal, and others. Sedge wrens and Savannah sparrows can be found here. Merlins, Bald eagles and Osprey often nest here.

12. Kak's Lake

is a good place to view eagles that visit quite often. Short-eared owls have been seen in the nearby tag alder/sedge complex. Spotted Sandpipers often nest on the western shore. Many warblers are seen around this lake in the conifer and shrub edge. Northern Saw-whet owl has been seen here in December. Many migrating species stop off here.

11. Tahquamenon River north of McMillan

Several flycatchers are seen here including alder, least, yellow-bellied, and olive-sided flycatcher. Yellow warbler and common yellowthroat are common; Swainson's Thrush are found in adjacent uplands. Crossbills, redpolls, nuthatches and chickadees are found here in winter.

10. Seney National Wildlife Refuge

is a great place for a driving tour. Migrants begin to move in as soon as the ice melts in April. Hooded Mergansers display here. Trumpeter Swans nest here. Many species of birds inhabit the upland and wetland interface. H pool is a great place to find migrating shorebirds in early spring or in August. Migrating warblers and vireos are found here both in spring and fall migration. Widgeons, Gadwalls, Goldeneyes migrate through Seney. Many waterfowl and wading species nest here. Osprey and bald eagle are common sights at Seney. Caspian, and black terns can be seen here. Yellow Rail makes its home here and hikes are held to see them. In the winter, look for wintering owls, black-backed woodpeckers, gray jays, and boreal chickadees.
